

# Label Material 7924

## Sheet Polyester Label Material

---

### Product Data Sheet

---

Updated : May 2000  
Supersedes : August 1999

---

**Physical Properties**  
Not for specification purposes  
(Calipers are nominal values)

<b>Facestock</b>	51 micron (2.0 thou) Bright Silver Polyester
<b>Adhesive</b>	20 micron (0.8 thou) #300 Acrylic
<b>Liner</b>	170 micron (6.7 thou), 147 g/m <sup>2</sup> (90#) Polycoated Kraft
<b>Shelf Life</b>	24 months from date of manufacture of product when properly stored between 22°C and 50% relative humidity.

---

**Features:**

- #300 adhesive bonds well to a variety of substrates including metals, high surface energy (HSE) plastics, and low surface energy (LSE) plastics. It is ideal for applications requiring high initial adhesion to LSE plastic surfaces.
- 147 g/m<sup>2</sup> lay-flat polycoated kraft liner provides easy sheet processing..
- 3M™ Label Material 7924 is UL recognised (File MH11410)

---

**Application Ideas:**

- Property identification and asset labelling.
- Warning, instruction, and service labels for durable goods.
- Nameplates for durable goods.

<b>Liner Release</b>	180° Removal of Liner from Facestock		
	Rate of Removal	N/10mm	Gms/25mm Width
	2.3 m / min	3.1	8
	7.6 m / min	3.5	9

<b>Environmental Performance</b>	The properties defined are based on four hour immersions at room temperature 22°C unless otherwise noted. Samples were applied to stainless steel panels 24 hours prior to immersion and were evaluated one hour after removal from the solution for peel adhesion. Adhesion measured at 180° peel angle (ASTM D3330) at 305 mm/min.			
Chemical Resistance	Adhesion to Stainless Steel		Appearance	Edge Penetration
Chemical	N/10mm	Oz/in	Visual	Millimetres
<b>Isopropyl Alcohol</b>	6.6	60	No change	0.8
<b>Detergent (1% Alconox®*)</b>	7.0	64	No change	0
<b>Engine Oil (10W30) @ 250°F (121°C)</b>	7.0	64	No change	1
<b>Water for 48 hours</b>	7.2	66	No change	0
<b>pH 4</b>	7.1	65	No change	0
<b>PH10</b>	7.0	64	No change	0
<b>409<sup>8</sup>* Cleaning solution</b>	7.0	64	No change	0
<b>Toluene</b>	3.6	33	Topcoat damaged	6.5
<b>Acetone</b>	5.1	47	Topcoat damaged or gone	4.32
<b>Brake Fluid</b>	8.1	74	No change	0
<b>Gasoline</b>	3.9	36	No change	5.8
<b>Diesel Fuel</b>	6.8	62	No change	1

Label Material 7924  
Sheet Polyester Label Material

<b>Temperature Resistance</b>	149°C for 24 hours:	no significant visual change
	-40°C for 3 days:	no significant visual change
<b>Humidity Resistance</b>	24 hours at 38°C and 100% relative humidity	No significant changes in appearance or adhesion

#### Accelerated Ageing

ASTM D3611 : 96 hours at 65°C & 80% relative humidity

	<b>Rate of Removal</b>	<b>N/10mm</b>	<b>Grams / Inch Width</b>
180° Peel Adhesion from Stainless Steel	305 mm / min	5.4	49

## Processing

### Printing:

Material has a topcoating which is receptive to many inks including UV and conventional ink systems. The converter should verify that their ink systems are compatible with the topcoating on the polyester film by testing beforehand. The topcoating is also receptive to other forms of printing including hot stamping and thermal transfer printing. The converter should verify that the method of printing is compatible with the topcoating by testing beforehand.

### Die Cutting:

Die cut with steel rule or flatbed dies. The 127 g/m<sup>2</sup> lay-flat also allows kiss cutting and back splitting. The converter can cut through the polyester facstock without cutting through the liner. Sheetable label materials are not recommended for rotary die cutting and stripping operations.

### Packaging:

Finished labels should be stored in plastic bags.

## Special Considerations

For maximum bond strength, the surface should be clean and dry. Typical cleaning solvents are heptane and isopropyl alcohol\*\*.

**NOTE:** When using solvents, read and follow the manufacturer's precautions and directions for use.

For best bonding conditions, application surface should be at room temperature or higher. Low temperature surfaces, below 10°C can cause the adhesive to become so firm that it will not develop maximum contact with the substrate. Higher initial bonds can be achieved through increased rubdown pressure.
